HISTORY OF PRESENT ILLNESS^[TJ.2]

Anthony Mitchell^[TJ.1], a^[TJ.2] 33 y.o. male^[TJ.1] presents to the ED with a Chief Complaint of^[TJ.2] No chief complaint on file.^[TJ.1]

I have limited information on this patient other than was provided by sheriff deputies that accompanied the patient to the hospital. I was told by one of the deputies that the patient has been incarcerated since January 12th. I was also told by the deputies that the patient has not been eating or drinking for several days. He was brought to the emergency room by sheriff deputies in a car for evaluation. One of our nurses noted the sheriff's moving the patient out of the vehicle and putting him in a wheelchair and he went outside and offered to move him to a stretcher. At that point he was noted to have agonal respirations breathing 2-4 times a minute. He was rushed into the ER and moved to our stretcher. He was unresponsive apneic and pulseless and cold to the touch. CPR was started and handcuffs were removed. His mother arrived in the emergency room about 3-1/2 hours into resuscitation and gave additional history. She said her son has been drug addicted for years. He has developed multiple abscesses. He has been suicidal. He is recently been confused. She is not heard from him in weeks. She requested that we not continue resuscitation.^[TJ.3]

Physical Exam^[TJ.2]

Vitals^[TJ.3] and^[TJ.2] nursing note^[TJ.3] reviewed.

Constitutional:

Comments:^[TJ.2] Patient was unresponsive but occasionally made some agonal movements including swallowing and minor movements of an arm or leg. This is while CPR with external compression devices in progress. Initial rectal temperature was 72° F 22° centigrade He appeared to have vomitus on his uniform.^[TJ.3]

HENT:

Head:^[TJ.2] Normocephalic^[TJ.3]
 Comments:^[TJ.2] No obvious head trauma^[TJ.3]
 Right Ear:^[TJ.2] External ear^[TJ.3] normal.
 Left Ear:^[TJ.2] External ear^[TJ.3] normal.
 Nose:^[TJ.2] Nose normal^[TJ.3]
 Mouth/Throat:
 Mouth: Mucous membranes are^[TJ.2] dry^[TJ.3].

Eyes:

Comments:^[TJ.2] Pupils were initially fixed and dilated but became responsive after CPR was initiated^[TJ.3]

Cardiovascular:

Comments:^[TJ.2] The patient remained in asystole PE a and occasionally VFib. No spontaneous pulse was ever palpated^[TJ.3]

Pulmonary:

Version 3 of 3

The endotracheal tube terminates at the T2 level above the clavicles. The femoral outer pad overlies the mediastinum. There is a backboard overlying the patient's mid and lower chest. The lungs appear generally clear. The left lung base was not included in the radiographic field of view. No pneumothorax is seen. The heart size is normal. No displaced rib fractures are identified.

IMPRESSION:

1. Acceptable endotracheal tube positioning, but consider advancing the tube 3-4 cm for more optimal positioning in the mid trachea.
2. No acute chest process within left technical limitations described above.^[TJ.1]

Version 3 of 3

Critical Care^[TJ.3]

Performed by:^[TJ.2] Jordan, Timothy B, MD^[TJ.3]

Authorized by:^[TJ.2] Jordan, Timothy B, MD^[TJ.3]

Total critical care time:^[TJ.2] 120^[TJ.3] minutes

Critical care time was exclusive of^[TJ.2] separately billable procedures and treating other patients^[TJ.3].

Critical care was necessary to treat or prevent imminent or life-threatening deterioration of the following conditions:^[TJ.2] circulatory failure^[TJ.3].

Critical care was time spent personally by me on the following activities:^[TJ.2] evaluation of patient's response to treatment, examination of patient, obtaining history from patient or surrogate, ordering and performing treatments and interventions, ordering and review of laboratory studies, ordering and review of radiographic studies, re-evaluation of patient's condition and vascular access procedures^[TJ.3].

PLAN OF CARE AND MEDICAL DECISION MAKING

Last vitals^[TJ.2] BP 145/78 (Patient Position: Lying) | Pulse 100 Comment: CPR in progress | Temp (!) 79.5 °F (26.4 °C) (Rectal) | Resp 16 Comment: bagged | SpO2 100%^[TJ.1]

MDM

Reviewed:^[TJ.2] nursing note and vitals^[TJ.3]

Interpretation:^[TJ.2] labs and ECG^[TJ.3]

Comments:^[TJ.2] The patient received immediate BLS and was bagged and chest compressions were started. There was no IV access visible because of his drug abuse. An IO was obtained in the left proximal tibia and also the left humerus. Patient received intranasal Narcan and then additional drugs per ET tube after he was successfully intubated with 1 attempt using the glide scope. Additional drugs were then given through the IO needles. Dr. Packer assisted in the resuscitation by placing a central line in the right femoral vein which was then used for all other resuscitation. The patient received numerous rounds of epinephrine and also atropine and bicarb. After it was determined that he was severely hypothermic no other cardioactive drugs were given. The patient was placed on external compression device and he was placed on ventilator and ACLS was continued with the plan to warm him up to approximately 30° centigrade and then initiate cardioactive drugs and possibly defibrillation. His rhythm remained asystole with occasional PEA and occasional VFib. He was shocked twice but there was no response as would be expected in a severely hypothermic state. When his mother arrived after 3-1/2 hours she requested that resuscitation be discontinued. This was done at her request. The patient was pronounced dead at 13:15.

I am not sure what circumstances the patient was held in incarceration but it is difficult to understand a rectal temperature of 72° F 22° centigrade while someone is incarcerated in jail. The cause of his hypothermia is not clear. It is possible he had a underlying medical condition resulting in hypothermia. I do not know if he could have been exposed to a cold environment. I do believe that hypothermia was the ultimate cause of his death.

The coroner was immediately notified.^[TJ.3]

HISTORY OF PRESENT ILLNESS^[TJ.2]

Anthony Mitchell^[TJ.1], a^[TJ.2] 33 y.o. male^[TJ.1] presents to the ED with a Chief Complaint of^[TJ.2] No chief complaint on file.

I have limited information on this patient other than was provided by sheriff deputies that accompanied the patient to the hospital. I was told by one of the deputies that the patient has been incarcerated since January 12th. I was also told by the deputies that the patient has not been eating or drinking for several days. He was brought to the emergency room by sheriff deputies in a car for evaluation. One of our nurses noted the sheriff's moving the patient out of the vehicle and putting him in a wheelchair and he went outside and offered to move him to a stretcher. At that point he was noted to have agonal respirations breathing 2-4 times a minute. He was rushed into the ER and moved to our stretcher. He was handcuffed. He was unresponsive apneic and pulseless and cold to the touch. CPR was started and handcuffs were removed. His mother arrived in the emergency room about 3-1/2 hours into resuscitation and gave additional history. She said her son has been drug addicted for years. He has developed multiple abscesses. He has been suicidal. He is recently been confused. She is not heard from him in weeks. She requested that we not continue resuscitation.^[TJ.1]

Physical Exam^[TJ.2]

Vitals^[TJ.1] and^[TJ.2] nursing note^[TJ.1] reviewed.

Constitutional:

Comments:^[TJ.2] **Patient was unresponsive but occasionally made some agonal movements including swallowing and minor movements of an arm or leg. This is while CPR with external compression devices in progress. Initial rectal temperature was 72° F 22° centigrade**

He appeared to have vomitus on his uniform.^[TJ.1]

HENT:

Head:^[TJ.2] Normocephalic^[TJ.1].

Comments:^[TJ.2] **No obvious head trauma**^[TJ.1]

Right Ear:^[TJ.2] External ear^[TJ.1] normal.

Left Ear:^[TJ.2] External ear^[TJ.1] normal.

Nose:^[TJ.2] Nose normal^[TJ.1].

Mouth/Throat:

Mouth: Mucous membranes are^[TJ.2] dry^[TJ.1].

Eyes:

Comments:^[TJ.2] **Pupils were initially fixed and dilated but became responsive after CPR was initiated**^[TJ.1]

Cardiovascular:

Comments:^[TJ.2] **The patient remained in asystole PE a and occasionally VFib. No spontaneous pulse was ever palpated**^[TJ.1]

Pulmonary:

Comments:^[TJ.2] **Initial agonal respirations**^[TJ.1]

Abdominal:

Palpations: Abdomen is^[TJ.2] soft^[TJ.1].

Musculoskeletal:

Cervical back:^[TJ.2] Neck supple^[TJ.1].

Comments:^[TJ.2] **There are multiple needle track marks over the extremities there is evidence of prior abscesses there is some abrasions there was an area of redness possibly from pressure on the left buttocks there was a nonhealing wound of the left heel**^[TJ.1]

Skin:

Findings:^[TJ.2] Bruising^[TJ.1] and^[TJ.2] erythema^[TJ.1] present.

Neurological:

Comments:^[TJ.2] **There was never any purposeful movement or response to pain**^[TJ.1]

DIAGNOSTICS

LAB:^[TJ.2]

Results for orders placed or performed during the hospital encounter of 01/26/23

Glucose - BMM/BMP POC Testing

Collection Time: 01/26/23 9:45 AM

Result	Value	Ref Range
POC Glucose	106 (H)	70 - 105 mg/dL

Comprehensive metabolic panel

Collection Time: 01/26/23 10:30 AM

Result	Value	Ref Range
Albumin	1.9 (L)	3.5 - 5.2 g/dl
Potassium	4.2	3.5 - 5.1 mEq/L
